Each plastic cup used on campus could outlive us by hundreds of years.

Made with GAMMA

Why It Matters to Us

Daily Campus Use

We use single-use plastics every day at campus events and meals.

Lasting Impact

These items do not simply vanish after disposal; they persist in the environment.

Local Environment

Our habits directly impact our local environment, affecting the place where we live and study.

Made with GAMMA

Plastic waste pollution is harming our local waterways and ecosystems.

We urge all campus food vendors to switch this month to **certified home-compostable** (ASTM D6400 / EN 13432) plates, cups, and utensils.

Problem

Plastic waste needs urgent action.

Solution

Compostable products offer a proven, sustainable alternative.

Benefit

The switch benefits both our campus and the environment.
